Contains a total of 3.213 unique ingredients (10 per recipe on average). Each recipe is an alternative way to prepare one of the 101 types of foods contained in Food101. Then, it captures the intra and inter-class variability of cooking recipes. The nearly 50 alternative recipes belonging to each of the 101 classes have been divided by train, valley and trial divisions in a balanced way. The main problem when it comes to 3.213 raw ingredients was that many of them were sub-class (for example, â€ «Tomato € or â€˜tomato salsa» of more general versions of themselves (e.g. â€ «Tomatoâ€« Tomatoâ€™). For this reason, we applied a simple removal of excessively descriptive particles such as "slitte" or "salude", resulting in a simplified version of 1,014 ingredients. To download our data, we have selected the Yummly Web platform (, we have downloaded about 50 recipes for every type of food in Food101. Each recipe contains an image and the unique list of associated ingredients. Content below we describe the files available in each folder: image///. Jpg - each of the data set images, where is the query name used to recover recipes data from yummly and is a unique name for the date image. Note that not all images belonging to a certain will belong to the corresponding class in Food101. Annotations/_images.txt â€ "Elenco of images belonging to each of theof data, where it can be or" section "," Val "o" test ". Annotations/_labels.txt â€ "Electing indexes for each image in _images.txt. _images.txt. index points to the corresponing line in ingredients_Recipes5k.txt annotations/ingredients_Recipes5k.txt ¢ÂÂÂ comma separated file that contains, in each line, the list of ingredients present in a certain image of the dataset. annotations/classes_Recipes5k.txt ¢ÂÂÂ list of unique name identifiers for each of the images.
